

Serial No.: 10/672,106

Attorney Docket No.: 2003P08211US

IN THE CLAIMS: DO NOT ENTER: /J.L./ (04/29/2008)**RECEIVED
CENTRAL FAX CENTER****APR 17 2008**

This listing of the claims will replace all prior versions and listings of the claims in the application:

1. (Previously Presented) A telecommunications device, comprising:
a positioning controller adapted to determine positioning information for said telecommunications device; and
a wireless communications controller adapted to receive said positioning information from said positioning controller and cause an audible alarm to be generated if said telecommunications device is determined to be out of a first predetermined geographic range;
wherein said wireless communications controller is adapted to cause positioning information to be transmitted to an associated administration device when said telecommunications device is determined to be outside said first predetermined geographic range for longer than a predetermined period after said audible alarm has been generated; and
a presence controller for defining one or more availability rules associated with a user of the device depending on a position condition of the telecommunications device.

2. (Canceled)

3. (Previously Presented) A telecommunications device in accordance with claim 1, wherein said wireless communications controller is adapted to cause positioning information to be transmitted to an associated administration device when said telecommunications device is determined to be outside a second predetermined geographic range.

4. (Original) A telecommunications device as recited in claim 1, wherein said positioning controller receives Global Positioning System (GPS) signals to determine said positioning information.

Serial No.: 10/672,106

Attorney Docket No.: 2003P08211US

5. (Original) A telecommunications device as recited in claim 4, wherein said wireless communications controller is a cellular telephone controller.

6. (Original) A telecommunications device as recited in claim 4, wherein said wireless communications controller is a personal communications service (PCS) controller.

7. (Original) A telecommunications device as recited in claim 1, wherein said predetermined range includes a geographic, date, daily routine, and time-of-day ranges.

8. (Original) A telecommunications device as recited in claim 1, wherein said positioning controller is adapted to receive predetermined range information via said wireless communications controller.

9. (Currently Amended) A telecommunications system, comprising:
a wireless device including a positioning controller and a communications controller, said wireless device adapted to cause an audible warning to be generated if said wireless device is determined to be outside a first predetermined geographic range; and

an administrative device for receiving alerts from said wireless communication device via said communications controller when said positioning controller determines that said wireless device is outside said first predetermined geographic range for longer than a predetermined period or is outside said first predetermined geographic range and a second predetermined geographic range and after said audible warning has been generated, but wherein said positioning controller does not send an alert if said wireless device returns to said first predetermined geographic range within the predetermined period and

a presence system for defining one or more availability rules associated with a user of the wireless device depending on a position condition of the wireless device, availability of the user including being independent of the wireless device.

Serial No.: 10/672,106

Attorney Docket No.: 2003P08211US

10. (Original) A telecommunications system in accordance with claim 9, wherein said positioning controller receives global positioning network signals for determining a position of said wireless communications device.

11. (Original) A telecommunications system in accordance with claim 10, wherein said communications controller comprises a cellular network controller for transmitting on a cellular telephone network to said administrative device.

12. (Original) A telecommunications system in accordance with claim 9, wherein said administrative device is adapted to display location information when said wireless device is determined to be outside said second predetermined range.

13. (Original) A telecommunications system in accordance with claim 12, wherein said predetermined range is associated with one or more of a geographic range, time-of-day range, daily routine, or date range.

14. (Currently Amended) A telecommunications method, comprising:
affixing a wireless device to a predetermined object; and
programming said wireless device to be in a first predetermined geographic range;

generating an audible warning if said wireless device is determined to be outside said first predetermined geographic range;

transmitting one or more alerting signals to an administrative device when said wireless device is determined to be outside said first predetermined geographic range for longer than a predetermined period after said audible warning has been generated; and

programming a presence system with one or more availability rules associated with the first and second geographic ranges for contacting a user of the wireless device including independently of the wireless device.

Serial No.: 10/672,106

Attorney Docket No.: 2003P08211US

15. (Canceled)

16. (Original) A telecommunications method in accordance with claim 14, further comprising transmitting one or more alerting signals to an administrative device when said wireless device is determined to be outside a second predetermined range.

17. (Previously Presented) A telecommunications method in accordance with claim 16, wherein said administrative device comprises a telephony device.

18. (Original) A telecommunications method in accordance with claim 16, wherein said one or more alerting signals comprise one or more e-mail signals.

19. (Original) A telecommunications method in accordance with claim 16, wherein said one or more alerting signals comprise one or more Instant Messaging signals.

20. (Original) A telecommunications method in accordance with claim 16, wherein said first and second predetermined ranges are associated with at least one of geographic range, daily routine, time-of-day range, or date range.
